

SRI LANKA'S FUEL PASS APP (RE-DESIGN)

CITIZEN DEVICE

CITIZEN DEVICE

Screens S1–S8 · Persona P1 — the second-hand vehicle owner. Four seeded journeys: clean match, successful ownership claim, failed claim, and the help path.

Set up or check your Fuel Pass

If your vehicle has ever had a Fuel Pass or QR code before — including if you've just bought it second-hand — you'll need to check it again here.

Continue

[Help & Answers](#)

S1 · Start

Entry and disambiguation. Answers the question asked most often and never answered at the March 2026 relaunch: do I need to register again? (Problem #16)

Help & Answers

Do I need to register again? 

Can I use my old QR code? 

Where do I find my chassis number? 

What about a 48cc bike with no number plate? 

I'm registering a brand-new vehicle for the first time — is this the right place? 

[Still stuck? Submit a dispute and an officer will help.](#)

S8 · Help & Answers

The four questions users repeated on launch day with no official reply — old QR validity, re-registration, chassis number location, unplatd 48cc bikes. (Problem #16)

Find your vehicle

Enter your vehicle registration number and chassis number. We'll check them against DMT records.

Vehicle registration number

WP CAB-1234

Chassis number

MA3ERLF1S00123456

Seeded vehicles (S2)

WP CAB-1234 – clean match → S5

WP KL-5678 – prev. owner, claim succeeds → S5

WP NC-9012 – prev. owner, claim fails → S7

S2 · Find your vehicle — clean-match seed

Identity anchored on vehicle plus chassis number, not mobile number (D14). Seeded WP CAB-1234. The demo panel drives every path on command rather than by chance.

Checking DMT vehicle records...

This can take a little longer during busy periods — we're checking directly against national vehicle records.

S4 · Checking DMT records

Deliberately slow. The relaunch failed on a synchronous dependency on the legacy DMT/RMV lookup; this wait state names what is happening instead of hiding it behind a spinner. (Constraint R §5-1)

Your Fuel Pass is ready

Show this QR code at any fuel station.

Registered to WP CAB-1234

Any Fuel Pass or QR code issued for this vehicle before today is no longer valid.

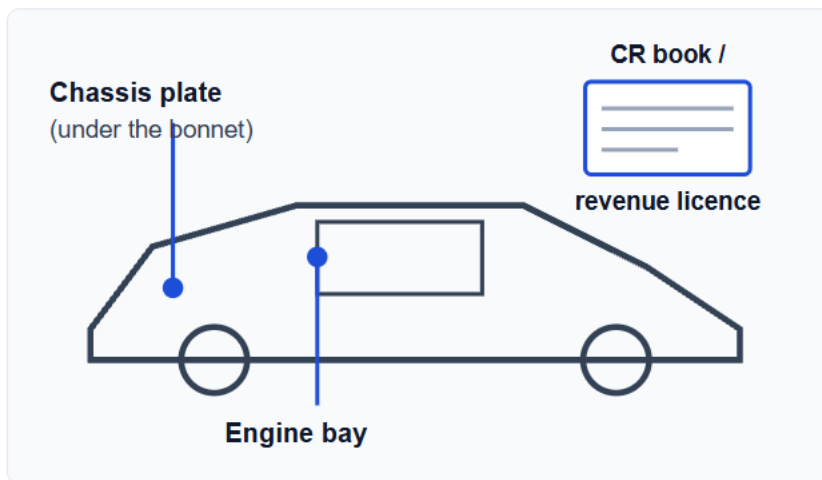

[Download QR code](#)

[Print](#)

S5 · Fuel Pass issued — clean path

Success state. Explicitly supersedes any pass issued for the vehicle earlier, closing the duplicate-QR problem reported at relaunch.

Where to find your chassis number

It's usually stamped on the chassis plate under the bonnet or in the engine bay, and printed on your vehicle registration document (revenue licence or CR book) next to "Chassis No."

← [Back to my details](#)

S3 · Where to find your chassis number

Reached from S2. The chassis number is the identity anchor, so not knowing where to find it blocks the entire journey. (Problem #16)

Find your vehicle

Enter your vehicle registration number and chassis number. We'll check them against DMT records.

Vehicle registration number

WP KL-5678

WP KL-5678 – prev. owner, claim succeeds → S5

WP NC-9012 – prev. owner, claim fails → S7

S2 · Find your vehicle — previous-owner seed

Seeded WP KL-5678: a vehicle whose DMT record still names the previous owner, the structural block documented in March 2026.

Checking DMT vehicle records...

This can take a little longer during busy periods — we're checking directly against national vehicle records.

S4 · Checking DMT records

Same wait state, second journey. One component, consistent copy regardless of which path follows.

This vehicle is still registered to a previous owner

The vehicle and chassis numbers you entered match a record on file — but that record hasn't been updated since it last changed hands. This isn't something you've entered incorrectly; it's our records catching up to a real sale.

 **[This is my vehicle — claim it](#)**

 **[This isn't my situation — get help](#)**

[Read more in Help & Answers](#)

S6 · Still registered to a previous owner

The centrepiece. The chassis number matches; the ownership record is stale. The copy states plainly that this is not user error but CPC records catching up to a real sale. Originally named “Record Mismatch” and renamed for exactly that reason. (Problem #2)

Your Fuel Pass is ready

Show this QR code at any fuel station.

Registered to WP KL-5678

Any Fuel Pass or QR code issued for this vehicle before today is no longer valid.

This Fuel Pass was issued after you confirmed you're the current owner of this vehicle. If that's not correct, contact CPC.

Download QR code

Print

S5 · Fuel Pass issued — after ownership claim

Same success screen, one extra line recording that the pass was issued on a self-declared claim. Keeps the fraud-surface trade-off visible rather than disappearing once the claim succeeds. (D13)

Submit a dispute

Some ownership changes need a closer look before we can update the record automatically. Tell us what you have, and an officer will review it.

Proof of purchase or ownership document

Drag a file here, or

[Choose file](#)

Anything else you'd like to add (optional)

Submit for review

S7 • Submit a dispute

Fallback when the self-service claim cannot resolve. Self-service is primary and human review is the exception — the reverse of what the original requirements document proposed. (D13)

WP CAB-1234 – clean match → S5

WP KL-5678 – prev. owner, claim succeeds → S5

WP NC-9012 – prev. owner, claim fails → S7

S2 · Find your vehicle — failed-claim seed

Seeded WP NC-9012: a previous-owner record where the self-service claim cannot succeed and the journey routes to dispute.

Checking DMT vehicle records...

This can take a little longer during busy periods — we're checking directly against national vehicle records.

S4 · Checking DMT records

Third journey through the same wait state.

Submit a dispute

Some ownership changes need a closer look before we can update the record automatically. Tell us what you have, and an officer will review it.

Proof of purchase or ownership document

Drag a file here, or

[Choose file](#)

Anything else you'd like to add (optional)

Submit for review

S7 · Submit a dispute

Reached after a failed ownership claim. No fabricated turnaround time is quoted — the system does not promise what it cannot know.

STATION DEVICE

STATION DEVICE

Screens S9–S10 · Persona P2 — the fuel station operator. Built on the outdoor contrast tier with enlarged touch targets.

Scan customer's Fuel Pass QR
code

[Can't scan? Enter manually](#)

DEMO CONTROLS ▾

Citizen device

Station device

Simulate scan (S9)

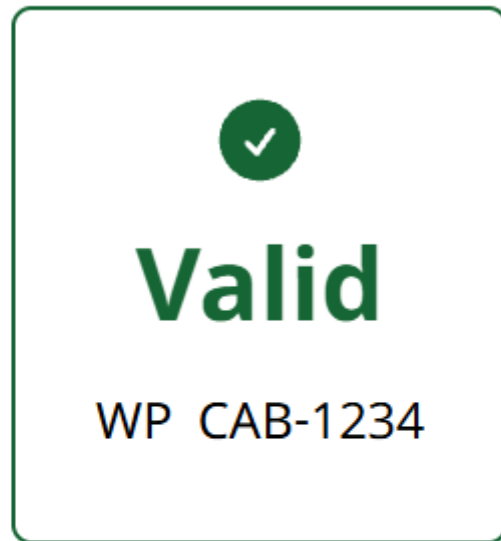

FP-VALID-0001 → valid

FP-SUPERSEDED-0002 → invalid

☐ Simulate offline

S9 • Station scan

Used at a pump, in sunlight, possibly with gloved or dirty hands. Outdoor contrast tier and 64px targets, both specified in the design system rather than chosen by eye. (Constraint R §5-6)

[Can't scan? Enter manually.](#)

S9 · Valid

Resolves in 100ms, deliberately instant. Evidence showed stations bypassing the QR entirely — if scanning is slower than waving a customer through, operators wave customers through. (Problem #23a)

Scan customer's Fuel Pass QR
code

DEMO CONTROLS ▾

Citizen device

Station device

Simulate scan (S9)

FP-VALID-0001 → valid

FP-SUPERSEDED-0002 → invalid

☐ Simulate offline

S9 · Station scan — superseded seed

Seeded FP-SUPERSEDED-0002, a pass replaced by a newer issue.

Not valid

WP KL-5678

This Fuel Pass was superseded by a newer one.

[Can't scan? Enter manually.](#)

S9 · Not valid

States the reason for rejection rather than only rejecting, so the operator can explain it to the customer in the queue.

Offline — checking against records last updated 07:00 PM.
Transactions will sync automatically once reconnected.

Valid

WP CAB-1234

[Can't scan? Enter manually.](#)

Offline — checking against records last updated 07:00 PM.
Transactions will sync automatically once reconnected.

Not valid

WP KL-5678

This Fuel Pass was superseded by a newer one.

[Can't scan? Enter manually.](#)

S10 · Offline

Records the last sync time and confirms transactions reconcile on reconnect. Several stations had no working reader at relaunch; offline tolerance is a requirement, not a nicety. (Problem #11)

Scan couldn't complete

We couldn't read that QR code — it may be damaged, or the camera couldn't focus. This doesn't mean anything about the vehicle.

Vehicle registration number

Check manually

[Back to scanning](#)

S10 · Scan couldn't complete

Manual fallback. The copy attributes failure to the code or the camera and explicitly not to the vehicle — the same fault-attribution rule as S6.
